

IMAGE DISPLAY SYSTEM, HOST DEVICE, IMAGE DISPLAY
DEVICE AND IMAGE DISPLAY METHOD

ABSTRACT OF THE DISCLOSURE

5 Disclosed is a processing on a host side and a panel
side, thus optimizing a work load of the whole of a system
including a graphics chip. Provided is an image display
system which comprises a host side for executing an appli-
cation and a panel side connected to the host side, and
10 displaying an image on the panel side, the host side trans-
ferring undeveloped image data to the panel side when an
image display is requested of the panel side having a panel
memory for developing the image, the panel side developing
the image in the panel memory based on the image data
15 transferred from the host side and displaying the image
developed in the panel memory on the panel.
